The classic introduction to fly fishing, now updated for a new generation of anglers. The best way to learn about fly fishing is right there at the waterside - with an expert who can point out where the trout are lying, explain the tackle you need and teach you how to use it. The next best way is to read this book. Keith Draper's handy, practical guide has introduced a whole generation of New Zealanders to the delights of fly fishing since its first appearance in 1985. It has now been thoroughly updated with new photographs and the latest information on developments in tackle and techniques. Follow its advice and you'll soon be fishing with confidence - and results!

In the past four decades, there has been growing interest in the exciting new topic of physics in low dimensions. Thousands of original ideas have been proposed in the literature, and some are confirmed experimentally, along with several Nobel prizes which have been awarded in this field. While there are several books available, almost all are technical and accessible only to expert researchers. This book provides an accessible introduction to the field, with less emphasis on technical details. Whilst this book does not provide a traditional history of nano-science, instead it uses simple explanations and case studies as vehicles to explain key discoveries and the importance of them, enabling readers without a background in the area to gain an understanding of some aspects of nanoscale physics. It will be of interest to researchers working in condensed matter physics, in addition to engineers and advanced students in those disciplines. It also remains accessible to 'physics enthusiasts' from other academic disciplines, as technical details are contained within boxes and footnotes which can be skipped for a general reading of the book. Features: - Provides an accessible introduction to a technical subject - Contains exciting developments from the cutting-edge science being conducted in the area - Authored by a recognised expert in the field

An award-winning, thoughtful, and moving glimpse into life during the Depression *Cat* is the fastest kid at her school—and with Play Day is coming up soon, she will be able to show off her speed to everybody. Unfortunately, her old-fashioned father forbids her to wear pants, even while playing sports. So *Cat* refuses to race, and *Zane*, an Okie boy whose family works on a nearby farm, wins. *Cat* is furious that *Zane* is so fast, and angry that he was able to beat all the sixth-grade boys, even in his bare feet. Though *Cat* hates *Zane* at the start, soon the two become friends. They are the school's best runners, after all. But while *Cat*'s family is doing well, *Zane*'s family has lost everything in the Depression. All *Cat* can offer *Zane*'s family is sympathy and friendship . . . until *Zane*'s sister gets pneumonia and *Cat* and *Zane* are forced into a race for the little girl's life. This ebook features an extended biography of Zilpha Keatley Snyder.

This publication aims to provide measurement principles for the estimating, tendering, contract management and cost control aspects of industrial engineering construction.

When Lucio Masterton discovers that he has a daughter, the Spaniard takes immediate action. He confronts Kirstie Rivers, the girl's mother, who he is sure has deceived him! But Kirstie believes that Lucio loves only money. She's been hurt badly by the billionaire and is determined that her daughter won't suffer the same fate. However, under the Spanish sun, Kirstie finds she is being ruthlessly pursued by Lucio, who will stop at nothing to take what he feels is his....

There have been significant developments in the field of numerical methods for diffraction problems in recent years, and as a result, it is now possible to perform computations with more than ten million unknowns. However, the importance of asymptotic methods should not be overlooked. Not only do they provide considerable physical insight into diffraction mechanisms, and can therefore aid the design of electromagnetic devices such as radar targets and antennas, some objects are still too large in terms of wavelengths to fall in the realm of numerical methods. Furthermore, very low Radar Cross Section objects are often difficult to compute using multiple methods. Finally, objects that are very large in terms of wavelength, but with complicated details, are still a challenge both for asymptotic and numerical methods. The best, but now widely explored, solution for these problems is to combine various methods in so called hybrid methods. Asymptotic and Hybrid Methods in Electromagnetics is based on a short course, and presents recent developments in the field.

Bobwhites in the Texas panhandle, prairie grouse in the Flint Hills of Kansas, Gambel's quail in New Mexico's arroyos, blue quail on the staked plains, and doves and Mearn's quail in Arizona. In these lyrical essays, Henry Chappell examines the bonds that exist between hunter, hunting dog, land, and prey. *At Home on the Range with a Texas Hunter* evokes a powerful sense of history and place and never shies from the responsibilities and ethical struggles every hunter faces.
