Section 16-2: Evolution as Genetic
Change Natural selection on single-gene
traits can lead to changes in allele
frequencies and thus to evolution. Natural
selection can affect the distributions of
phenotypes in any of three ways:
directional selection, stabilizing selection,
or disruptive selection.

Two Types of Cells. There is another basic cell structure that is present in many but not all living cells: the nucleus. The nucleus of a cell is a structure in the cytoplasm that is surrounded by a membrane (the nuclear membrane) and contains, and protects, most of the cell's DNA. Based on whether they have a nucleus, there are two basic types of cells: prokaryotic cells and eukaryotic cells.
