14.1 Heat - College Physics | OpenStax. In Work, Energy, and Energy Resources, we defined work as force times distance and learned that work done on an object changes its kinetic energy. We also saw in Temperature, Kinetic Theory, and the Gas Laws that temperature is proportional to the (average) kinetic energy of atoms and molecules.

We then move on to consider radioactivity and nuclear physics together with a study of heat and gases. The course concludes with a survey of the 'big ideas' in physics over the last 500 years, the discoveries that have had a profound influence on our understanding of the world, leading finally to an introduction to Einstein's theory of Special Relativity.

Francis Weston Sears (October 1, 1898 – November 12, 1975) was an American physicist. He was a professor of physics at MIT for 35 years before moving to Dartmouth College in 1956 and is best known for co-authoring University Physics, an introductory physics textbook, with Mark Zemansky. The book, first published in 1949, is often referred to as "Sears and Zemansky", although Hugh Young became ...
