This book is needlessly wordy and verbose in comparison to Neil Salkind's Exploring Research 8th edition. Gay's book and Salkind's book both cover all the same educational concepts, but in my opinion Salkind explains things more clearly, with fewer words, and with a sense of humor. Read more.

Introduction to Research

"Educational Research: Fundamental Principles and Methods is for both consumers of empirical investigations and beginning researchers. Consumers locate, read, understand, critique, and then use the results of research to become more effective professionally and to make sound educational decisions. Beginning researchers need to know the fundamental process of conducting good research, a foundation for learning how to conduct research and report results. The book is designed to enable students to become intelligent consumers and proficient investigators of educational research. It is intended for a one-semester or one-term course in educational research and is best suited for advanced undergraduate and beginning graduate students in all areas of education. The examples from studies bring sometimes obtuse and dull research principles to life by showing excerpts from published articles. Students will find them interesting and informative. There are over 160 excerpts from recently published studies from 70 different journals, representing various levels of rigor and myriad subject areas. Although the excerpts focus on the field of education and educational publications, this book is also appropriate for students in related social sciences who need to learn how to read and understand research and begin the process of becoming investigators"--

How to Design and Evaluate Research in Education 10e provides a comprehensive introduction to educational research. The text covers the most widely used research methodologies and discusses each step in the research process in detail. Step-by-step analysis of real research studies provides students with practical examples of how to prepare their work and read that of others. End-of-chapter problem sheets, comprehensive coverage of data analysis, and information on how to prepare research proposals and reports make it appropriate both for courses that focus on doing research and for those that stress how to read and understand research.

This title is only available as a loose-leaf version with Pearson eText. Applying Educational Research focuses on relating research to practice, helping educators see the relevance of research to their daily work. This goal of making research relevant is accomplished by focusing on current "problems of practice." Each chapter highlights a set of important issues for teachers, students, and schools--issues like teacher evaluation, the effectiveness of close-reading strategies, and the use of computer-supported instruction. The research examples and articles in the chapter then address these issues, providing students a meaningful context for the information they are learning about research methods. Through this approach, students learn about the research process and current research on topics that directly impact practice. From reviews of the text: The writing style of the textbook is excellent. . . . Writing clarity for content builds from one paragraph to another. . . . The Gall, Gall, and Borg textbook is the only text I would consider for [my Master's-level research course]. Because the authors are scholars and practitioners, they bring a depth and range to the topic of educational research that is unsurpassed." --Vikki K. Collins, Troy University "The writing style is very clear. I find it easy to read and navigate among the chapters. Most graduate students in my class will not have any problems reading the book. The authors provide a very gentle introduction to educational research. . . . The authors adopt a balanced view of educational research. . . . They have explained most of the quantitative analyses used in educational research, and they have explicated the major theories of qualitative research. They have introduced the research techniques in a clear manner accessible to a broad audience inside and outside of the education field." --Xiaofeng Steven Lui, University of South Carolina 0133831574 / 9780133831573 Applying Educational Research: How to Read, Do, and Use Research to Solve Problems of Practice, Loose-Leaf Version with Video-Enhanced Pearson eText -- Access Card Package Package consists of: 0132868636 / 9780132868631 Applying Educational Research: How To Read, Do, and Use Research To Solve Problems of Practice, Loose-Leaf Version 0133398811 / 9780133398816 Applying Educational Research: How To Read, Do, and Use Research To Solve Problems of Practice, Pearson eText -- Access Card

Assuming no prior knowledge, Educational Research by R. Burke Johnson and Larry Christensen offers a comprehensive, easily digestible introductory research methods text for undergraduate and graduate students. Readers will develop an understanding of the multiple research methods and strategies used in education and related fields; how to read and critically evaluate published research; and the ability to write a proposal, construct a questionnaire, and conduct an empirical research study on their own. Students rave about the clarity of this best seller and its usefulness for their studies, enabling them to become critical consumers and users of research.
