~~part 2 10. Material balance in volumetric gas reservoirs: Practical applications Gas Reservoir Engineering~~

A conventional gas reservoir is a relatively open system due to large porosity, high permeability, and good pore-throat connectivity, which is favorable for fluid flow and pressure conduction, with the gas

reservoir pressure system close to the formation pressure. Shale reservoirs, due to their low porosity and permeability and their strong heterogeneity, are relatively a closed pressure system.

~~Gas Reservoir~~

Gas reservoir engineering is the branch of

reservoir engineering that deals exclusively with reservoirs of non-associated gas. The prime purpose of reservoir engineering is the formulation of development and production plans that will result in maximum recovery for a given set of economic, environmental and technical constraints.
