From complete system design to testing and balancing to troubleshooting, this practical handbook examines all aspects of variable air volume (VAV) systems for heating, ventilating and air conditioning systems. The author has incorporated his own hands-on expertise into this concise presentation which guides the reader in applying the "tricks of the trade" for reducing installation and operating costs while increasing occupant comfort. Variable air volume applications are examined in detail for dual duct, multizone, terminal bypass fan powered, and other commonly used types of systems. You will learn effective methods of varying fan volume, calibrating pneumatic and electronic boxes, and applying the various types of VAV control systems. A wide range of topics are addressed, including temperature, pneumatics, direct digital control, coil controls, morning warmup and night heating, VAV point list, fan tracking, fume hood applications, and conversion of existing systems to VAV. A comprehensive chapter on cost estimating has been added to this second edition.

Developed over the course of many years of on-the-job projects involving HVAC energy auditing, testing/balancing and cost estimating, and refined through feedback from thousands of engineers and technicians who have used them, the forms contained in this manual are concise, comprehensive, and optimally organized for easy reference. Complete sets of forms are provided for all aspects of testing and balancing, energy auditing, indoor quality diagnosis, and load calculations. The first edition, entitled HVAC Energy Audit & Balancing Forms Manual compiled these time-saving forms for the first time in a single reference. This enhanced second edition adds a new chapter on technical management, providing procedures for achieving thorough, systematic and accurate problem solving, troubleshooting and decision making in building systems management and contracting.
